

Big Community Event Early in November

Will Be Sponsored By The
Little Theatre Association

A special meeting of the Little Theatre executive last week it was decided to make the local theatre a community enterprise and use it this year for the purpose of raising funds for local organizations such as churches, lodges, clubs, school Red Cross etc.

With this end in view the executive is now sponsoring a community dramatic competition, open to all organizations on the same basis. Entries must be in the hands of sec-treas. Miss M. Edlithon not later than Oct. 6th accompanied by an entry fee of one dollar which will be refunded after the show, only three entries can be accepted for the first competition, more than this number apply they will necessarily be held over for a second competition.

Literary - The net proceeds from the competition are to be divided as follows: 20% guaranteed to each competing organization 10% prize extra to the winning performance, 10% prize for organization, 10% prize for individual. The remaining 20% to Little Theatre reserve fund for improvements in the community hall.

Every cent taken from tickets will positively remain in Redcliff Theatre repairs and go to local business men all printing will be done here, and the proceeds will go to swell the coffers of the competing organizations.

The executive feels that this idea should meet with a big response. In good times or bad recreation is essential to all here is a chance to get in on first class entertainment and keep the money in community organizations where it will do the most good.

Three judges from Medicine Hat will be up to select the winners. Competitors may enter any form of entertainment providing it takes up not less than 10 and not more than 45 minutes. One act plays, vaudeville stunts, minstrel shows etc. are all acceptable. Probably the easiest to handle is the one act tragedy or comedy. Prospective competitors may obtain material free of charge from the Little Theatre Executive upon request.

It is hoped that organizations will grasp the wonderful opportunity to add to their funds and at the same time have an enjoyable time co-operating with other societies. The last competition here was an outstanding success the winning play received \$40 and all other competitors \$30 each. It is the intention of the executive to endeavor to make arrangements to have the local band in attendance on the night of the competition. If the 300 seats in the theatre are sold out arrangements will be made to increase the seating capacity.

This is to be all Redcliff's show and may the best performers win. Entries are already being received. If you need money get busy.

The Bishop will be with us about the middle of November for Confirmation.

Car Accident Here Last Saturday Night

Fortunately No One Was Very
Badly Injured

Four townspeople narrowly escaped serious injury in a car accident between here and Medicine Hat last Saturday night.

Mr. Dan Forget, head machinist at the glass plant, was driving his car when a tire blew out and the car swerved from side to side finally turning over on the ditch and landing right side up. In the car with him were Mr. and Mrs. Stanley Brown and Miss Terry Walker of the post office staff. All were badly shaken up and received minor cuts and bruises but none were seriously injured. Miss Walker had her collar bone broken and was cut about the limbs.

From the look of the car after the accident spectators pronounced it a miracle that there were no fatalities. It is presumed that the metal top of the car prevented a more serious catastrophe. The car was an almost total wreck. Fortunately all are recovering nicely.

Canadian Women Make Presentation To Countess Bessborough

On The Eve Of Her Departure
From Canada

Canada's women Tuesday presented a picture of farewell to the Countess of Bessborough and her three children, one of them a Canadian, in a presentation ceremony at Government House where they were represented by Lady Perley and members of the national committee for her Lady Bessborough Gift Fund. Lady Perley presented Her Excellency with a gold cup 16 1/2 inches high bearing the inscription: "Her Excellency, the Countess of Bessborough, from the Women of Canada, 1931-1935."

Churches

ST. MARY'S CHURCH

Mass will be celebrated on the 3rd Sunday of each month at 8:30 a.m.

ST. AMBROSE CHURCH

Gordon Memorial Celebrates Anniversary

Special Service Last Sunday
and Supper Monday

The Anniversary Service held in Gordon Memorial Church last Sunday were voted very successful. In the morning the pastor presided, and in his announcements noted the fact that it is fifty two years since services were first held in the district; that the school room was dedicated for services Oct. 9th, 1921, during the ministry of Rev. T. S. Patton now of Estevan; that the main auditorium was dedicated and opened on March 24th 1929 during the ministry of Rev. Wm. B. Smith now of Thorold Alberta. Mr. Wm. Henderson the senior organist, turning the key. The present pastor is now on his sixth year of ministry. Rev. J. A. Claxton, B. A. B. D. of Medicine Hat delivered an appealing message at the morning service on the text "Hitherto hath the Lord helped us." The Junior Choir sang the anthem "Lift up your heads" and Miss Morrison sang "The Stranger of Galilee". In the evening Rev. E. E. Pow exchanged with Rev. W. J. Bainbridge, M. A. B. D. of Fifth Avenue Church Medicine Hat. His message was on "The Resurrection of Christianity" and was greatly appreciated by the greatly congregation. The Senior Choir rendered the anthem "Praise the Lord O My Soul".

The Anniversary Supper on Monday evening was of excellent quality and was well patronized. The Ladies Aid Association for this response to their efforts.

A concert in the evening under the chairmanship of C. G. Pow presented an entertainment programme, prepared by Mrs. L. Shimmrin. The attendance at the concert was disappointing.

Mr. Miles Gibbanks Passes Away Tuesday

Has Been a Resident of Redcliff
Since 1911

Miles Kerby Gibbanks, who can rightly be termed as a pioneer of this town, passed away Tuesday evening, after a lingering illness extending over the past two years. Miles, as he was familiarly known, was born in Cumberland, England, fifty years ago last month. When a young man he left the old country and came to Canada, arriving in Redcliff in 1911 where he has resided continuously ever since. He came here as a miner but as

Helped The Farmers

HON. ROBT. WEIR

Never before had any government done as much for agriculture as the administration of Prime Minister Bennett. Hon. Robt. Weir, minister of agriculture, told an audience in Manitoba, Tuesday.

The only discordant note in the agricultural program of the conservative government during the past five years, Mr. Weir said, was the hostility of Liberal Leader MacKenzie King. In the House of Commons he charged the Liberals with every possible obstacle in the way of the government's efforts to assist Canadian farmers.

In one of the fastest and most decisive fights for some time, Mr. Weir brushed off Mr. MacKenzie in the fourth round last Tuesday evening. Louis had fought practically won in the first round when he drew the champion Raer's nose and sent him to his corner groggy.

He was a willing worker and could turn his hand to any occupation he had been employed in several of the industrial plants here from time to time.

The late Mr. Gibbanks took a keen interest in the affairs of the town and at one time was a candidate for the town council. He was also interested in sports and in the early days was an active player on the football team.

Deceased was a good citizen with a philosophy all his own. Although small of stature he was credit to the heels, which largely accounted for his hanging on to life so long under such a severe and trying illness.

The funeral will take place from St. Ambrose Church on Sunday afternoon at 2:30 and the remains will be interred in the St. Ambrose plot of Redcliff cemetery.

G.M. Blackstock to Address Electors Here

Will Speak on Friday Evening
October 4th

Mr. G. M. Blackstock, K. C. conservative candidate for this constituency in the approaching general election, will address a meeting in Redcliff on Friday evening, October 4th. He will be accompanied by other speakers when public questions occupying the attention of the electors in this most important campaign will be discussed. All are invited to attend.

Announce A New Alberta Bond Issue

Amount of Issue and Interest
Rate Not Decided

The institution at an early date of a new bond issue to be known as "Prosperity Bonds," by which Alberta residents will be able to invest their money, draw interest and circulate it all within the province, was announced by Premier William Abernethy.

We have had letters from fifteen points of the province asking us for opportunities for investment and to assist the Social Credit movement," he declared.

"By this issue it is hoped that we can refund the bonds held outside the province and thereby increasing the purchasing power within our own borders," he said.

"This has nothing to do with the payment of basic dividends but merely to take steps toward establishing prosperity in the face of the debts created in the past."

"It is believed that with properly established, we can settle debts of the Province in from ten to fifteen years."

Board Accepts Grain Delivery from Yesterday

Prices Announced by Board
Will Be Paid

Yesterday the Canadian wheat board officially took delivery of wheat from producers in western Canada.

Participation certificates and other necessary documents have now been printed and distributed to elevator companies and other grain-handling agencies in the west, said a statement from the board's headquarters.

Prices announced by the board September 17th and September 23rd are the prices to be paid to producers for the various grades delivered to the board, basic carlots, in store at Fort William or Vancouver.

Wheat now in store and owned by producers or wheat wanted in carlots to terminal markets at Fort William or Vancouver, can also be delivered to the board at these minimum prices but in the case of carlot shipments, the statement said, the grower must declare within 10 days of the wheat being unloaded whether the grain is for delivery to the board.

LOOK AT YOUR LABEL

Quiet Session of Council on Monday

Several Officers Were Made For
Town Buildings

A quiet session of the Town Council was held last Monday evening with Mayor Cox in the chair and councillors Rindahl, Brydie, Sengstam, Moore and Myers present.

Mr. McGlinchey made an offer of \$20.00 for a house on 4th St. The matter was referred to the building committee for investigation. The committee decided that the offer be not accepted and the price was set at \$50.00.

John Soukup made an offer of \$90.00 for house on first street but as the house did not belong to the town no deal could be made by the council.

Mr. Bergeron made an offer of \$25.00 for house and barn on Lynn's property on Third St. Council set the price at \$40.00 and Mr. Bergeron took the building at that price.

The matter of water rates for the Dominion Glass Co. was left over till next meeting to allow for reading of meter.

Bills from Medicine Hat Hospital for patients from Redcliff were referred to the finance committee for investigation. The action of the Mayor in arranging for transportation of patient to sanitarium was approved by council.

The offer of \$60.00 for house on Third St. was not accepted as the intention was that the building was to be moved out of town.

A letter was read from the Utility Commission regarding claim for property used for highway through Redcliff and stating that matter was being investigated.

Monthly accounts as passed by the finance committee were approved for payment.

The town formen was instructed to inspect several buildings now owned by the town and see that same are safe.

Councillor Rindahl suggested that since the night were now lengthening steps should be taken to improve the street lighting.

ONSUS OF STOCK ON ALBERTA FARMS

Total shipments of cattle to the U. S. markets from Alberta since the beginning of the year have been approximately 30,800 head.

Live stock census of Alberta taken by card survey in June by the federal bureau of statistics shows a slight increase in cattle and some decrease in the hog population.

Hog population is shown as reduced from 896,100 head in June of 1932 to 899,100 in June of this year, but the December survey should show a considerable increase as a result of the expected increase in fall litters.

Cattle population shows an increase from 1,570,000 head to 1,604,200 head.

Horses are reduced from 693,000 head to 639,600 head. Poultry total is 5,785,200 compared to 6,992,000 in 1932.

The exchange Telegraph agency correspondent at Addis Ababa reported yesterday Emperor Haile Selassie had ordered a general mobilization of Ethiopian troops.

Motorists--- Take It Easy

The highways of North America are dotted with thousands of motor cars as people travel from city to town and town to city, and as they proceed on business journeys. Each and every one of these cars is a high-powered vehicle, capable of doing almost incalculable damage unless handled with judgment and care. The accident and death rate in Canada is almost as high as Ontario last year recording 512 deaths and 8,900 accidents which were not fatal, but many of which meant people scared and maimed and immense suffering.

In the driving of a car, a man reveals himself. It is the thoughtless, reckless driver that is largely responsible for the toll on the highways. What is gained, however, arrives at his destination a few seconds ahead of schedule? Why do so many men, when seated behind the wheel of a car, act like bores and leave behind them every vestige of courtesy and consideration for others?

The motor is a wonderful invention, but in the hands of a man without judgment or balance, is a terrible instrument of destruction, leaving death and maimed lives in its wake.

In the August issue of that popular little magazine "Reader's Digest" there appeared an article entitled "And Sudden Death" which has attracted continent-wide notice and hundreds of thousands of reprints of which are being distributed through Canada and the United States. The only regret is that a copy cannot be placed in the hands of every person who drives an automobile. It is a gruesome recital of what automobile accidents really are—a realistic portrayal of scenes witnessed every day on the highways of the supposedly civilized countries.

The automobile, says the writer of this article, is treacherous, just as a cat is. It is tragically difficult to realize that it can become the deadliest missile. As enthusiasts tell you, it makes 60 an hour feel like nothing at all. But 65 an hour is 100 feet a second, a speed which puts a viciously unjustified responsibility on brakes and human reflexes, and can instantly turn this deadly luxury into a mad bull elephant.

Collision, turnover or rollover, each type of accident produces either a shattering dead stop or a crashing in the old direction — and, since the occupant — meaning you — continues in the old direction at the original speed, every surface and angle of the car's interior immediately becomes a battering, tearing projectile, aimed squarely at you — inescapable. There is no bracing yourself against these imperative laws of momentum.

It's like going down Niagara Falls in a steel barrel full of railroad spikes. The best thing that can happen to you — and one of the rarer things — is to be thrown out at the doors spring open, so you have only the ground to reckon with. True, you strike with as much force as if you had been thrown from the Titanic. But at least you are spared the lethal array of gleaming metal knobs and edges and glass inside the car.

Anything can happen in that split second of a crash, even those lucky escapes you hear about. You can have died through windshields and come out with only superficial scratches. They have run cars together head-on, reducing both to twisted junk, and been found unharmed and arguing bitterly two minutes afterwards. There have been three just the same — he was only exercising his privilege of being errant.

And every time you pass on a blind curve, every time you hit it up on a slippery road, every time you step on it harder than your reflexes will safely take, every time you drive with your reactions slowed down by a drink or two, every time you follow the man ahead too closely, you're gambling a few seconds against agony and sudden death.

There is an old legal phrase that "time is of the essence of the contract." This is true not on the highway; the reverse is true. Your duty as a driver is to bring safety home not only yourself, but your family and friends who may be traveling with you. Really, it is your duty to not drive your car as to in no way endanger others but to allow them to likewise reach their homes in safety.

Rebuilt By New Method

Worn Machine Parts Made As Good As New

Finds of the speed of a rifle bullet, particles of hot metal rebuild worn machine parts by a new method. Worn heads are cut into the surface to be repaired and then the metal is sprayed on the grooves and ridges in such a way as to "freeze" and become part of the metal under treatment. The spraying is done with an electrically operated gun that "shoots" the metal particles through a tiny hole in the nozzle at 5,700 feet per second. The result parts are smoothed and polished with abrasive, giving long wear. Valves, rods, cylinder walls, shafts, bearings and turbines are among the parts treated successfully—Popular Mechanics.

There are 25 different kinds of alcohol commercially produced.

Julilee Week Was Busy

King's Secretaries Repplied To Over Ten Thousand Messages

Statistics just available give some indication of the work performed by His Majesty's secretaries during Jubilee week. During the period May 3 to 9 the King received 10,254 telegrams from every conceivable part of the world. Every number of a telegram within the British Empire, no matter what his rank or station in life, had a reply sent him by His Majesty or by one of the private secretaries. Overseas messages were similarly answered, the more important by cable, but many by a personal letter from the King's secretary or His Majesty's representative in the Dominion or Colonies.

A new metal, invented by a British firm, is lighter than aluminum, as strong as cast-iron, cheaper than brass, impervious to sea-water, and can be bent when cold. It is in use by the Admiralty.

The hyacinth is the nearest living relative of the elephant. It is a living animal no larger than a rabbit and is erroneously designated in the King James Bible as a coney.

All houses on the main street of Istanbul, Turkey, are red, by decree of the municipal council. On feast days they are draped in the Turkish colors.

Worked Under Difficulties

French Engineers Had Hard Job Building Hotels In Algeria

As the French pushed further and further southward into the Sahara, pacifying the roving Arab tribes as they go, hotels are being erected for the accommodation of Government officials, visiting Army officers, business men and the occasional venturesome tourist. The hotels had to be taken south, through the desert, in parcels. Each parcel weighed about 200 lbs. and was one camel-load. Caravan after caravan, travelling forty-five days through sands, brought to Timounin, in the far south of Algeria, the many tons of windows, doors, glass, china, linen, cutlery, furniture, electrical installation and other equipment needed for the local hotel. Neither foremen nor European laborers would agree to go there, so the place was built by French army engineers, who themselves had to trace in the sand the first outline of the building because the superstitious wild Arabs of the region feared The Evil Eye, and would not have anything to do with blue-prints. They did, however, make the mud bricks, consent to the walls, and to drag up to the site the date-palm trunks forming the roof beams, and "girdle-work." The rain had to come in parcels. Even the ships of the desert travelled the parcels were temperamental. They would not travel on even such good roads as were to be found along their line of route, but had to be steered over soft sandy areas. Camels, sent from the capital of foot messengers unless allowed soft tracks.

Drama Festival Finals

Drama Arts Set For 1936 Contest In Western Canada

Regulations covering the 1936 Dominion drama festival, provide for contests in 11 regions into which Canada is divided for competition, with a final week in Ottawa beginning Monday, April 20.

Issued by J. A. Aylen, honorary secretary-general of the festival, the regulations set the following dates for English play regional festivals in western Canada: British Columbia (Vancouver), Jan. 27 to Feb. 4; Alberta (Calgary), Feb. 6, 7, 8; Saskatchewan (Saskatoon), Feb. 12, 14, 15; Manitoba (Winnipeg), Feb. 20, 21, 22.

Regional festivals for French plays will be held in Quebec City, Montreal and Ottawa on dates to be arranged and announced later.

No play performed in the finals in Ottawa in 1934 or 1935 will be eligible for presentation in 1936, the regulations set forth. As in the past the festival will be restricted to one-act plays or single self-contained scenes from longer plays which occupy no less than 20 and no more than 45 minutes.

Direction of the festival again will be in the hands of Col. H. C. Osborne, honorary director, and an executive committee. In each region a regional committee will have charge.

A government laboratory in Texas announced in producing luncheon 90,000 per cent. pure.

AS ETHIOPIA RALLIES TO ARMS

Doing their bit

Imperial guard

Men, women and even children in Ethiopia have rallied to defend their country from threat of war by Italy. In the upper parts two women are busy making uniforms for the rapidly mobilized army. Members of the Imperial Guard, carrying bayonets on their guns and are products of training by imported military experts.

Lighthouse Heroine Dead

Madame Mariel Wren Overlaid

Fame On Dole Isle
Mrs. Mariel Wren, heroine of a tradition, died recently at Lorient, France.

It was in 1910 Mrs. Mariel (the translation of whose name is "valley") leaped in one agonizing night to wild fame, won the admiration of mariners the world over, and subsequently the Carnegie Medal for her husband was the lighthouse keeper at Kerdouan Light on Belle Isle.

When she was about to set the light in motion one twilight it would throw its warning rays across treacherous shoals.

The woman called her children and made them turn the heavy light all night while she tried to fix her handstand the machinery. When the children no longer could continue the endless grind, the mother took up the task and kept the light turning until dawn, when she collapsed as help arrived.

Sir Herbert Robson

Prominent Grain Merchant Dies Suddenly in England

Sir Herbert Robson, prominent grain merchant and chairman of the Baltic exchange, died suddenly in London. He was 61 years of age.

Sir Herbert was a former opponent of governmental measures for restriction of wheat production and control of world wheat trade.

Sir Herbert died at Malvern, Hereford. He was born in Northampton in 1874. He was a director of a number of important companies. Twenty years ago he was chairman of the chamber of commerce of Karachi, India, and a member of the Bombay legislative council.

Used Like A Pencil

No Pressure Required With New Tool For Engraving

For engraving on gold, silver, brass, copper, aluminum and other metals as well as on bone, ivory and hardwoods, a plug-in tool that is used like a pencil is available. No pressure is required, the operator writing or printing as with a pencil. The tool cuts rapidly with a child-like stroke. The powerful little motor operates on 110-volt, a.c. circuits, the standard lighting current used in homes. The engraver sits the hand—Popular Mechanics.

Times Have Changed

Back in the good old days a boy could go to a picnic and have a dandy good time on two bits. He would ride the merry-go-round a couple of times, drink a glass of red lemonade and spend the other dime for a ticket to a minstrel show. But how things have changed. A boy of the same age in these fast-changing times will spend at least 42 or 44, and blamed if he believes he has as good a time as the boy who took a quarter with him for his day's expenditures at a picnic.

There are 15 per cent. more earthquakes when the moon is nearest the earth than there are when it is farthest away.

"WRAP ME UP" HOME FROM OR "COVER ALL" BECOMING TO SLENDER AND MATURE FIGURES

By Ellen Worth
Here's a new type of wrap-around dress home frock, that is quite smart.

It has a padded bodice that carries down into the skirt, that would flatter any figure. The slender sleeves are puffed. Calico or percale print is especially nice for its development.

As a "Cover-all" to wear "over" one's "best" frock to prepare dinner, it is nice indeed of a dainty print. It is unbelievably simple and inexpensive.

Style No. 310 is designed for sizes 14, 16, 18, 20, 22, 24, 26, 28, 30 and 32. Includes bust, Size 30 requires 4 1/2 yds. of 35-inch material.

Patterns 15c each. Address mail orders to: Pattern Department, Winnipeg Newsprint Co., 175 McDermid Ave., St. Winnipeg.

Australian Fashion Book contains many more suggestions for winter clothes. Send for your copy to-day, the price is 15c.

Polar Hop Postponed

The attempt of a Soviet aeroplane to fly non-stop to San Francisco, by way of the north pole, has been postponed until the summer of 1936. It has been officially announced. The setting in of the polar night was given as the reason for the postponement.

Wore Felt Union Hats

Trade union funds of a penny per street were paid to Lady Kelly, wife of Admiral Sir John Kelly, and other officers' wives when they drove the first river into the plains of the new frontier Assara at Portmanto.

A \$5,000,000 steel plant will be built at South Durham, England.

Predicts Horseless London

Ministry Of Transport Working Toward Mechanizing System

Within five years, it is predicted, the London drive horse will be no rare in London as to be regarded as a curiosity, the street of 1930 being practically entirely free of horses. The Ministry of Transport is hastening this condition by plans to substitute horse-drawn traffic by a completely mechanized system, and some of these plans will be carried into effect shortly.

The busiest streets in London will be closed to horse-drawn traffic in the near future by regulations soon to be issued by the department. Already there is a device operating in Oxford street between certain hours. Later an edict will be issued that horse-drawn vehicles will not be allowed in London at all after a period of from three to five years.

Under existing traffic legislation, the Minister of Transport, L. More-Bell, has power to put an end to traffic by horse in London's streets. His department, however, has no intention of driving horses from the streets until their owners have had fair warning.

Eastern Excursions

Bargain Fares Offered By C.P.R. and C.N.R. For Early Autumn Trip

Popularity of early autumn bargain fares to eastern Canada last year has induced the Canadian Pacific and Canadian National railways to offer similar travel privileges in September of this year, according to an announcement by Joseph H. Puffer, western secretary, Canadian Passenger Association.

This fall weather rate, attractive after the heat of summer, begins with a ticket sale from September 21 to October 4 and bears a final return limit of 45 days in addition to the date of sale. Stop-over privileges go with the tickets within a limit at the stations of Port Arthur, Armstrong and east.

Tickets will be honored in coaches, tourist or standard sleepers on payment of fare according to the accommodation desired. They will be on sale from all stations from Port Arthur, Armstrong and west, including Pacific Coast, any station at stations including St. Louis, Seattle, Spokane and east.

Not Empty Hand

An Italian-American dispute has arisen in Amsterdam—the Abyssinian, a commissionaire at an Italian restaurant, gave notice that he was returning home to join the army. As he was leaving the building, the Italian proprietor told him he was carrying a large bundle. Asked what it contained, the man replied "Revolver." But police summoned to the scene discovered it was a quantity of the restaurant's silverware.

Cleaning Railway Coaches

The latest method of cleaning railway coaches is that used by the German Federal Railways. The carriage is run into a huge airtight cylinder into which is pumped a strong disinfectant gas. The carriage remains in the gas long enough to eliminate every germ, every stain, every corner, so that all harmful bacteria are killed.

Many Research Workers On Problem Of Developing Rust-Resistant Wheats

A score of years arduous research and cross-breeding of many varieties of wheat has led to the discovery of wheat from Ottawa that farmers in the spring of 1937 may expect almost a quantum of rust resistant wheats. And even yet the search for the perfect wheat is not concluded.

Thousands of bushels of grain in Manitoba and Saskatchewan are being lost to farmers this year because of the rust blight. Wheat stem rust has been known to plant pathologists for the past 50 years. The organism is a parasitic plant and, wafted by wind, clings to wheat stems and enters food in the extent of causing the kernels to wither. Sometimes the attack is early and the kernels are prevented from forming.

An investigation carried on for over five years showed epidemics of rust in western Canada are initiated by spores which are blown northwest from fields of rusted grain lying south of the international boundary. The organism that causes rust does not develop in the soil and therefore treatment of the soil or seed does not prevent the growing grain from becoming infected.

Science long ago believed a rust resistant wheat could be produced. Canada started its search for rust resistant wheats in 1907. The Dominion experimental farms at Brandon, Man., and Indian Head, Sask., and subsequently the work was extended to the Dominion research laboratory at Winnipeg and other points. Universities and agricultural colleges came to the aid of government in the search.

Exacting tests were made of various grains and as new types were produced they were tested for older strains and new strains as well. The big problem was to find a rust resistant wheat that would have the qualities of milling and baking equal to the best of Canada's high-grade wheats. A minute record of the work was kept.

Scores of varieties and crossed varieties are still under the study of the Dominion rust research laboratory. Two families stand out as the most promising. One family was produced from crossing Marquis with a durum variety known as Peated. The other family originated through a cross between a Marquis and Howard on a derivative of a Marquis-Romer cross.

Chiefly from these two families the federal department of agriculture hopes in 1937 to distribute small quantities of the rust resistant wheats to farmers in western Canada. The department expects to have a great thousand bushels available for distribution in two to four-bushel lots. Control distribution will be retained to prevent exploitation of the new strains.

Until qualities of the new wheats have been definitely proven, they will have numbers as means of identification. And the rust research laboratory will continue even though the new varieties show good yielding ability, good milling, baking and early ripening qualities.

Many research workers have taken part in the studies. The plant pathologists have carried on their work under Dr. H. T. Gussow, Dominion botanist. In 1924 parliament made a grant of \$45,000 for erection of the rust laboratory at Winnipeg and Dr. D. L. Bailey conducted the pathological work until he went to the University of Toronto. His work was taken over by the present director, Dr. J. H. Craigie.

The plant breeding work has been conducted at the laboratory as under direction of Dr. C. H. Goulden, a notable plant breeder and geneticist of the staff of the experimental farm branch of the federal department of agriculture. Notable work in the production of new rust resistant types was carried on at the Brandon experimental farm under the late S. J. Rignison and at the University of Saskatchewan under Dr. J. H. Harrington.

Why Knives Are Rounded

Forks as table instruments were in use in Italy long before their introduction into England in 1601. Table knives used to have sharp points like present-day carving knives. The change in the shape was made by Cardinal Richelieu. Because he was Chancellor of France using his knife as a toothpick, he ordered his sword to round the end of every knife in his possession.

Texas leads all states in production of turkey, with North Dakota ranking second.

Sugar From Dahlias

Experiments Conducted By Research Committee Have Been Successful

Fields abounding with brilliant dahlias may be the source of a valuable product of the future commercial society. The American Chemical Society in convention at San Francisco was informed.

A method of producing for market sugar twice as sweet as that, now commonly used has been developed by Dr. W. W. Rieger, Prof. Z. W. Weatherly, and research associates at the University of Southern California.

Commercial production already has become a practical possibility, the scientists say, as the result of the working out of a means of manufacturing on basis comparable with that of beet sugar.

Professor Weatherly pointed out that due to the difference in growing season, dahlias sugar could be manufactured in cane or beet sugar plants during the winter months.

He said economic possibilities of dahlias sugar are enhanced by its dietary properties. Those on reducing diets, the university expert declared, would find its sweetness less calorific. There is the further favorable factor that it is not a diabetic patient who cannot utilize common sugar that they can obtain sugar of fruits such as dahlias.

Another factor in it was reported by Prof. C. A. Zievegen of the University of California.

Infants should be fed a little copper daily, in addition to iron, to insure good health.

The Common Cold

New Vaccine Said To Reduce Liability Of Infection

A fresh trend on the common cold, by a new "tetraepithel" vaccine made by which reduced colds by 43.7 per cent, last winter, was announced in New York. The actual reduction was 70 per cent, among 390 persons. The first was administered 20.3 per cent, credited as a fraction probably due to a mild common cold season.

In addition to the 200 with 70 per cent cold reduction, the vaccine was used by 46 persons who had previously been inoculated with virtually continuous colds. Of these 43 suffered less than one cold for the winter, and three reported absolutely no benefit.

The report is made in Science, the official organ of the American Association for the Advancement of Science, by George E. Rockwell and Herman C. Van Kerk of the University of Chicago. The work was supervised by bacteriologist and H. M. Powell of the Lilly Research Laboratories, Indianapolis.

Salt Has Many Uses

Live Stock Needs It More Than Humans

Most people know how badly they feel the need of salt when it is absent, but few realize that live stock need salt even more than do human beings. The Salt Institute of C.I.L. has issued a comprehensive chart showing the wide variety of uses to which salt is put by farmers. Under the heading "In the Barn," the quantities of salt needed in rationing for different types of stock are given, as well as the need for salt to keep down the fermentation of hay with its consequent loss of vitamins. The quantities of salt for the butter, and for butter wrapping papers. "In the Home" the uses of salt vary from table use to pickling and mouth health, while "For Caring Man's Health" the special needs of salt are given.

Salmon Take High Leap

The highest leap that salmon are known to make is in the Pacific Northwest. The Columbia River, passing the falls involves a perpendicular leap of from sixteen to twenty feet, according to the level of the water in the river. Salmon are known to travel 3,000 miles to spawn. From the moment they enter fresh water they cease to take any food. Two or three days after spawning they die.

Have you any cracking bowls? Wash the salt in salt water and have overnight in linned oil.

A telephone pole erected on Cape Cod more than 40 years ago is still in service.

The first Canadian athletes to compete in Russian sporting events left Montreal on the C.P. liner "Duchess of York". Left to right: B. Philipovich, of Mysken, Sask.; Bill Brown, of Montreal; and K. Ranta, of Port Arthur.

Missing Radium Recovered

Last Visit In Found In Stomach Of Pig

A \$3,000 vial of radium, accidentally thrown away, was back at the hospital at Saint Paul, E.D., after an uncomely process search by two University of Minnesota scientists who traced it to the stomach of a squealing pig.

When the loss of the tube was discovered, Dr. A. J. Mos called in Dr. J. W. Buchta and Dr. H. H. Harvey of the university. They quickly devised a detector from gold leaf and started for the dump grounds following the tracks. The searchers divided the dump into five sections and by elimination reduced to three and finally to one the likely pig.

"The radium is inside that pig," Dr. Buchta said to F. L. Thibodeau, garbage hauler, who scratched his head in disbelief. Thibodeau called a butcher who opened the animal.

The tube, measuring 1-16 of an inch in diameter and 3-4 inch in length, was in its stomach.

Takes On Big Job

Ric Hartley, organizer of the first section of the Labour Day parade at Liverpool, England, has started one of the greatest tasks ever attempted by an omnibulger. He will count 10,000,000 birds. The counting and classification may require several years.

Nearly 75,000 persons in factories are making candy in England.

The SNAPSHOT GUILD

LABOR DAY PICTURES

Opportunities are unlimited on Labor Day for story-telling pictures such as the above.

It's hard to realize that the good old summer time has rushed by so fast and that we will soon be enjoying our last holiday of the summer season—Labor Day. But even if it is the last, it's almost the best of a picture-taking angle.

The above snapshot is just one example, and there are countless others. In there is such a variation of light in different locations it is not possible to give any set rule for diaphragm openings and shutter speeds. For instance, when the above picture was made the sun was shining brightly but the picnic party was shaded by surrounding trees. The snapshot with a folding camera got the correct exposure when he set the diaphragm opening at f8 and the shutter speed at 1/250 of a second. But suppose there was a beach party; no trees are near to cast shadows but instead the bright sunlight is shining down on the party and additional light is reflected from the water and sand. Then what?

When you then set the shutter speed for 1/100 of a second with the f11 diaphragm opening. This setting of the diaphragm opening and shutter will serve two purposes. First you will have the proper exposure, and second—1-100 of a second it will not be necessary for your subject

to "hold still" when the picture is snapped.

If you have a box camera you would open it to the largest stop for the picture above and a smaller one for the beach picture.

Although the principal rules for good picture making have been laid out in time been given in the Snapshot Guild, some readers may be benefited by a review of a few of them.

If there is any doubt, always give a little longer exposure.

Avoid prominent straight lines such as telegraph poles and tree trunks and horizons which seem to cut the picture in half.

Never allow the sun to shine directly into the lens of your camera or there will be a flare of light on the negative.

Do not try to crowd too many objects nor too much scenery into a picture. Simplicity is the keynote of art in photography.

Two-thirds hand or two-thirds sky makes for better composition in a landscape photograph than one-half each.

With ordinary cameras (fast moving objects should always be photographed with the most rapid shutter speed and the largest lens opening.

With that review, here's to more and better pictures over Labor Day.

JOHN VAN GULDER.

Adult Mass Education Launched In China To End Widespread Illiteracy

Voyage Of The Els

Is Considered One Of Most Astonishing Feats In Nature

The fishermen who, as reported in a London newspaper caught 10,000 young "els" off the West Coast of Britain and transferred them to the Red Prussian fishing grounds, have initiated a stage of one of the most astonishing processes in nature.

This is the voyage of the "els" from their Atlantic birthplace to European homes. Afterwards they return unharmed to the breeding grounds of the Sargasso Sea.

The process was authoritatively investigated a few years ago by the late Prof. Johannes Schmidt, director of the Carlsberg Physiological Laboratory at Copenhagen.

He made a world voyage in the Royal Danish research ship Dana and definitely established that the Sargasso Sea is the place where the young "els" are spawned by European and American eels.

The "els" do not move down the rivers and lakes of the two continents every autumn, never to return. Having spawned, they die. In the spring millions of small eels begin a three-year voyage to homes they have never known.

The children of the American species make their way only to America. The European species similarly come only to Europe. The Indo-Pacific species have two spawning beds, one in the east and the other in the west of the Indian Ocean.

The eels are accustomed to the sight of the Dutch, eld boats which deliver their catches at Billingsgate. The trade is an old and privileged one. In the Netherlands include a minority who live in the East. End and attends to the crew's welfare.

Attempts to restore Egyptian mummies to their original state by chemical solution containing sodium hydroxide have so far proved unsuccessful.

Has Many Substitutes

Spinal Is Not Any Better Than

Science is coming to the defense of the youngster who refuses to eat his spinach. Mother, it seems, is only partly right when she pleads with him to "eat your spinach—it's good for you." It's good for him, but not nearly as good as it's been cracked up to be.

Spinal contains iron, but studies at the University of Wisconsin have shown that iron in agricultural chemistry laboratories which have already made countless contributions to the health of the vitamins and minerals, show that only 25 per cent of the iron is "available," as scientists put it; that is, it is easily by the body.

Other vegetables are no better than spinach in this respect.

A higher percentage of the iron in meat is available, according to the Wisconsin investigators. More than 60 per cent of the iron in heart muscle and liver, both of beef and pork, is usable for blood-building. In ordinary beef the proportion is 50 per cent. The iron in cereal breakfast foods and grains is also only partly available; but the iron in soy beans was found to be 60 per cent available, and that in alfalfa and blood, 25 per cent. New information will now make it necessary for nutritionists to revise present standards.

So spinach, after all the family tensions it has caused, turns out to be just one of the many vegetables that are plentiful of substitutes—Detroit Saturday Night.

Produce Smokeless Fuel

Cheap Method Described To American Chemical Society

A method of producing the coal now used to heat residences into a smokeless fuel at a cost of about \$1 a ton was described at the American Chemical society at San Francisco. By using the Karlick method of low temperature carbonization, the process is said to be simple and cheap.

Charles D. Burt, of the University of Utah reported they were able to successfully produce a solid smokeless fuel.

A Striking Capt

A cartoon appearing in the magazine "Herald and Echo" is a striking caption and one which everyone would be well advised to heed. It is: "Train Me Mind to Mind to Train."

Motorists should always remember that trains always have the right of way. A few seconds saved in the only road for winning a race with a train. And a hospital bed or coffin are usually the alternative rewards for either a lie or a loss.

Three miles above sea level in the Andes, miners work the largest known deposit of vanadium ore.

The western meadowlark has 27 different melodies.

THURSDAY SEPT. 26th 1935

TOWN OF REDCLIFF

"The Local Tax Arrears Consol-
idation Act 1935"

The Council of the Town of Redcliff have passed a By-law declaring that the above Act will be applicable to the Town of Redcliff and said By-law has been approved by the Minister of Municipal Affairs in writing.

All consolidated arrears of taxes shall under this Act be payable by five equal annual payments together with interest on or before the 15th day of December except as hereinafter mentioned.

The following persons may make application to the Council to come under the provisions of the above Act.

Any person firm or corporation who is the owner of any parcel of land in the town of Redcliff against the rate of which there is a subsisting obligation for arrears under "The Tax Recovery Act 1929."

Any person who has been a bona fide resident of the Town of Redcliff for 12 months immediately preceding the date of his application, in the case of lands which have been acquired by the town of Redcliff but not sold, or such persons personal representative.

In such cases where the applicant's property is to be offered for sale at the forthcoming Tax Sale on August 24th, 1935 such applicants should make their applications in time for the council to consider same previous to that date.

Upon receipt of the application the Secretary-Treasurer shall calculate the amount required to pay the arrears or taxes if the same were consolidated and the applicant shall deposit with the Secretary-Treasurer one-fourth of such sum.

In such cases where the application to consolidate is made after the 15th day of November 1935 the applicant shall also deposit with the Secretary-Treasurer sufficient to pay the current years taxes.

In any event the current years taxes shall be paid by the applicant on or before the 15th day of December.

When the application is granted the deposit shall be applied to the applicant's consolidated arrears otherwise it shall be repaid to him.

In case the application is not granted provision is made for appeal to the Minister of Municipal Affairs.

The Council may on the applications in writing of any person liable under a consolidated agreement under this Act and with the approval of the Minister, by resolution, extend that agreement for one year and waive payment of the instalment payable under the agreement for any one year of the years for which such agreement is made in case it is thought proper so to do by reason of crop failure or other circumstances.

No buildings fences fixtures or other improvements shall be removed from any land in respect to which there is a subsisting tax consolidation agreement.

WORLD HAPPENINGS BRIEFLY TOLD

Eleven Anglican cathedrals in South Africa will each receive a plane from Canterbury, England in token of "friendship and goodwill."

The United States tariff commission was under order to investigate the competition between domestic and foreign pulpwood. Canada is the largest seller of this forest product in United States markets.

The Lewis machine gun, standard equipment for the British army since Great War days, is being replaced rapidly as possible by a new and lighter weapon produced in Czechoslovakia known as the Bren gun.

Demonstration of a batteryless telephone which generates its electricity from voice sounds has been given by three Montrealers—Armand Parent, Pierre Dufresne and Carmen Norcross.

Four workmen were killed and four wounded when a road construction laborer made a pile into an unexploded Great War shell. The accident took place on the road between Venice and Trevise, Italy.

A show place among southern Alberta farms, the 7,000 acres owned by the Duke of Sutherland, situated near Brooks, have been purchased by the Eastern Irrigation District. Five thousand acres are reported irrigable.

Word was received by the American Geographical society of the successful ascent of Mount Riebel, 16,430 feet high, by Walter Wood and an expedition for the society into the Yukon territory. The fact has never before been accomplished.

The Daily Herald declared today the Japanese government is preparing to open diplomatic negotiations with Great Britain, Belgium and other powers "with the idea of securing emigration rights in the Far East for several millions of their surplus population."

Early this month between 70 and 80 young Canadians will be taken into the Royal Canadian Air Force from a "waiting list" of nearly 6,000 youthful flying enthusiasts the Air Force department is estimated to be able to begin their three years course.

Announcement of inauguration of a monthly air mail service between Port Chipewyan, Alta., and a new post being opened at Goldfields, Sask. was made by the post office, last Sunday. Goldfields is situated on the north shore of Lake Athabasca, approximately 120 miles from Port Chipewyan.

Canada's Canning Industry

Three Provinces Supply People With Fruits And Vegetables

The canning of fruits and vegetables is carried on most extensively in the provinces of Ontario, British Columbia and Quebec, where climatic conditions are favorable for the growing. The principal fruits canned in Ontario are Apples, pears, plums, peaches, cherries, currants, gooseberries, blueberries, raspberries and strawberries.

In addition, British Columbia has the apricot and the leghornberry. The vegetables canned include Tomatoes, peas, corn, beans, beets, carrots, pumpkins, squash, asparagus and green beans. The canning season begins in June and continues through the summer and autumn up to October, being at its height in July, August and September.

The pack in 1934 was estimated at 2,201,275 cases of fruits and 1,513,542 cases of vegetables valued at \$2,894,851 and \$9,297,268, respectively. Of the canned vegetables, peas, tomatoes rank first in the number of cases with 1,609,846, baked beans with 1,045,796 cases and corn followed in order by peas with 822,880 and corn with 401,856. Of the fruits, apples rank first with 384,374 cases, followed by peaches with 230,704 cases, peaches 161,615 and plums 120,716. Other important canned goods were: cherries of all kinds 1,438,523 cases and tomato juice 452,478.

St. Thomas Times-Journal.

Cherries—These are especially popular, namely, they simply laugh at the laundry."

Customer—"I know that kind; I had some which came back with their sides split."

After medicine compared so favorably with European knowledge of the subject that Frankenstein feared that the Indian native medicine taught in the first college they established for natives of Mexico.

To be 70 years young is sometimes more cheerful and hopeful than to be 40 years old.

Has King's Medal

Indian Chief Proud of Present Given Silver Tote 150 Years Ago

Proudly displaying a medal given to the chief of his tribe 150 years ago by King George III, in recognition of his services to the British crown during the American Revolutionary war, Chief Sitting Eagle of the Pigeon River, stood in Winnipeg for his picture recently.

"Chief," he was asked, "would your people consider taking this country back if it was offered to you?" The chief became indignant. People, apparently, are always asking him to take the country back, and it's getting on his nerves.

"Ugh!" he mumbled. "We had this country once, when it was in a lot better shape than it is now. Pale faces won't win, and Indian always plays for keeps. You got it, you keep it; no exchange can be made on this goods, thank you," he declared.

The chief's medal, which he will hand on to his nephew when he goes to the happy hunting grounds, is as handsome as it is rare. It is one of several which were struck following the war, and was given to the chief of the Seven Nations. On one side is a facsimile of the King and on the reverse is a picture of a canoe and a wolf allied against an unseen foe.

The Sioux at Pipestone are not natives of western Canada, but came here many years ago from the United States. They do not come in large numbers, but the government disburses every year in Canadian dollars.

Birthday Of Panama Canal

Waterway Was Opened To Traffic At 10 Years Ago

The Panama Canal, which shortens the water route from New York to the Pacific coast by more than 8,000 miles, came to its 10th birthday on August 15. Since it was opened to traffic 21 years ago—Aug. 15, 1914—fulfilling the dream of the United States to make engineering surveys as early as 1821, \$20,566,620 in tolls has been paid for 52,673 passages of ships between the Atlantic and Pacific oceans.

The canal now has a capacity estimated at about 240 ships a day although in the fiscal year ending June 30 the average number of daily transits was only about fifteen. The highest daily average was less than eighteen in the peak year of 1926.

Militia Units

Alliance of 14th Canadian Light Horse With New Zealand Force

Alliance of the 14th Canadian Light Horse, non-permanent, active militia of Canada, with headquarters at Climbax, Sask., to the Queen Alexandra's Mounted Rifles, New Zealand military force, has been approved by the king. It was announced at Ottawa by the department of national defense.

The 14th Canadian Light Horse was organized in 1910. Headquarters of the unit is located at Climbax, Sask., and is under the command of Lt.-Col. W. Van Allen.

U. S. Government Prohibits

Contents Of Chain Letters From Rich Harvest

Send-a-dime chain letters promising to pay off for the United States treasury in a way to make envious the originators of the 40-day wonder of personal property financing.

In Denver alone, reputed point of origin of the dime chain letter, 100,000 letters are impounded, with the contents to be turned over to the treasury after a year of gathering dust.

Postmaster J. C. Blevins estimated the Denver haulers at from \$3,000 to \$4,000.

Greatly Indebted

The late Bishop Ames, the following anecdote is told: While preaching under a certain canonization in the West, a member began a tirade against universities and education, thanking God that he had never been corrupted by them with a college.

After a few minutes, the bishop interrupted with the question: "Do I understand that the brother thanks God for his ignorance?"

"Yes," was the answer, "you can put it that way if you want to."

"Well," said the bishop, "I have to say to you that the brother has a good deal to thank God for."

The Tokyo earthquake of 1923

caused a greater monetary loss than the entire Japanese-Russian war. The West, a number began a tirade against universities and education, thanking God that he had never been corrupted by them with a college.

A statistician reports that there have been over a million deaths from cancer in the United States in the past ten years.

ASSISTING NATURE

By Jack Miner.

During the past year I have read a number of articles both in magazines and newspapers, as well as many letters that come to me on the subject of "Nature's Balance," deprecating actions or systems on the part of man, which the Creator intended.

"Interfering with Nature," "Upsetting Nature's Balance," and so on. To all who adopt that attitude, I should like to put myself on record to the effect that, personally, I believe the so-called "Balancing of Nature" was left entirely with man.

God created everything and then He created man, and I believe in assisting Nature for the benefit of humanity. God created everything and then He created man, and I believe in assisting Nature for the benefit of humanity.

Look, for instance, at the animal world with the live-stock in the farmer's barnyard as example. Did God create the Jersey Cow, and the Hereford? No. He gave man the original stock and then through man's breeding he developed many breeds, some for the purpose of producing the greatest quantity of milk, and some for the purpose of producing the greatest quantity of meat.

All have been on earth a long time, of course, but their difference is the result of man's management. And, remember, man had to interfere with Nature in developing them.

Much the same thing is true of the birds. God created them, but man has developed many breeds for the purpose of producing the greatest quantity of meat, and some for the purpose of producing the greatest quantity of feathers.

Recently I was in some of the most beautiful farms where the character of the farm work is done in a heavy for the common use, yet where the climate is too warm to permit of the horse doing its best. In that part of the country, the horse has been crossed the same with our common horse and produced a beast that is almost perfect in its kind.

It has been the work of man to develop the different breeds, Leghorns, Brahmas, Minorcas, Pouter, Rocks, and so on, some of which are especially valuable as layers and others as fowls. Our much prized turkeys is nothing more or less than the wild turkey, questioned and improved.

Eighty-five years ago our Canadian north-west was granted by the British the white man's land, making the value of the fertile soil, established a garden, and where was placed to preserve the species from extinction, and turning the land upside-down it did into one of the largest and most valuable of earth's great wheat-fields, with towns and cities and finally government buildings dotted here and there across its vast expanse. Remember, it was left to man to develop it.

And speaking of wheat-fields, wheat has been man's favorite food for centuries. Yet wheat, even as it is being grown in Canada is comparatively recent years, had certain seeds which were planted in the fall and did not always survive the severity of the winter. It was not so producing as abundantly as seemed desirable and it did not mature ripen enough to escape the early autumn frosts. Then came to our aid such men as Professor Charles Saunders, cerealist of Ottawa, and he developed the wheat of today.

As for me, I think God for all He made, for the raw material. He gave us with which to work; that He made us in His own likeness, and His own image, and endowed us with sufficient wit and power to use the raw material and keep on discovering and bringing within reach of us all the blessings He created. To illustrate, we have "Nature's curse," let it live? Personally, I think He gave man "dominion" over all these things.

Indeed, one is moved to ask the question, "What would our animal world, our farms and orchards and gardens be without man? He is the man who has not assisted Nature? Yet the very same white man, who, covered this continent, came ashore, cut down a tree and began to develop North America into a garden for hundreds of millions of people, that same man, according to some, disturbed the balance of Nature."

As for me, I think God for all He made, for the raw material. He gave us with which to work; that He made us in His own likeness, and His own image, and endowed us with sufficient wit and power to use the raw material and keep on discovering and bringing within reach of us all the blessings He created. To illustrate, we have "Nature's curse," let it live? Personally, I think He gave man "dominion" over all these things.

Man ploughs and plants and digs and sows, and he has made it his work with which to work; that He made us in His own likeness, and His own image, and endowed us with sufficient wit and power to use the raw material and keep on discovering and bringing within reach of us all the blessings He created. To illustrate, we have "Nature's curse," let it live? Personally, I think He gave man "dominion" over all these things.

He works with his hoe and spade; He works with his plow and harrow, and thus a garden is made. He must be proud when till the soil He created. To illustrate, we have "Nature's curse," let it live? Personally, I think He gave man "dominion" over all these things.

How wonderful a thing it is to be in partnership with God! I say, He wants all of us to be partners.

Household Arts

laws, and by study, experimentation and the rigid selection of choice strains, developed a wheat that could be planted in the spring, that produced more than the rate previously, that would mature within a certain period of time, and that it retained all its former qualities. We have in the Marquis and the Coronet and other species of wheat, developed by man, which are the result of his interference with Nature, and have given, and has used, the power to develop, manage and control it.

Or if you will consider your flower and shrub world, the roses which are in America a little insignificant flower growing along the banks of streams, which we called, commonly the "dog," from its man has developed the rose that grows three or four feet high, varied in color, and some of them with a fragrance which is almost perfect in its kind.

Did God create the American Beauty Rose? No. He gave man the original stock and then through man's breeding he developed many breeds, some for the purpose of producing the greatest quantity of flowers, and some for the purpose of producing the greatest quantity of fragrance.

Did God create the American Beauty Rose? No. He gave man the original stock and then through man's breeding he developed many breeds, some for the purpose of producing the greatest quantity of flowers, and some for the purpose of producing the greatest quantity of fragrance.

Stories About Swords

Skip's Crew Vouch For One About Fight With Whale

Legends have gathered round the swordfish. Broken swords found in the hulls of wooden ships may have been thrown in accidentally. In the museum of the College of Burgundy, London, there is part of the bow of a whale's skull, which was found on board and five inches in circumference. It had penetrated more than thirteen inches of wood. In the British Museum there is a sword that had gone through twenty-two inches of wood.

On a voyage from Coplyn to London a vessel suddenly sprung a leak. Examination showed that a hole an inch in diameter had been punched in the vessel's copper sheathing. The insurance company denied liability, on the ground that the damage had been done by some agent other than a fish. The jury that heard the claim against the company found that the damage had been done by contact with some animal, the other water, adding rider that a swordfish probably was responsible.

In a small book on life in the sea, J. D. Daniel, lecturer on oceanography in Liverpool University, records an exciting incident of the swordfish's attack on a ship. Little Journeys In Science

ALUMINUM

(By Gordon H. Quest, M.A.)

Aluminum is a comparatively new metal, made from iron, copper, lead, tin, and the precious metals are all heavy substances, while aluminum is only about one third as heavy as iron. The chief characteristic of aluminum is that it is not affected by air or moisture.

The story of the discovery of aluminum is a story of scientific achievement. The first aluminum was made in 1808 by Sir Humphry Davy, who was the first to produce it in a pure state. He did this by electrolysis, a process in which electricity is used to break down a compound into its elements.

Aluminum is a very useful metal. It is strong, light, and does not rust. It is used in a great many ways, from the making of aircraft to the making of household goods. It is also used in the making of electrical wiring, because it is a good conductor of electricity.

Aluminum is also used in the making of paint. It is used in the making of paint because it is a good reflector of light. It is also used in the making of paint because it is a good conductor of electricity.

Aluminum is also used in the making of paint. It is used in the making of paint because it is a good reflector of light. It is also used in the making of paint because it is a good conductor of electricity.

This Robin Was Clever

Calld Man To Help Rescue Mate From Snake

The story of a robin which called a man to rescue his mate from the jaws of a snake was told Friday.

George Swan, attracted by a bird screaming and snapping against the back door of his home, went to investigate. The robin flew away as he approached, appearing to call him on, and then followed him.

It led him to the end of the garden, circling close to the fence, calling loudly. There in the grass Swan saw a snake with another robin in its mouth.

He killed the three-foot reptile with a stick and the two birds flew away together.

One of the most important of all the factors bringing about the state of prosperity and depression, says the Dominion Bureau of Statistics, is the output and value of agricultural products. In a country such as Canada, where agriculture occupies a large place among the economic activities of the nation, the crop yields cannot but affect the general business.

MISS ALADDIN

—By—

"One White Rider to Crease"
"The Unknown Fort," etc.

SYNOPSIS

Nancy Nelson is a sub-deb, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he has, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and miss the path Aurora took to follow. A truck comes along the road, driven by Matthew Adams, and she calls him to come to her. They ascend the hill, look around, and then go on to Aurora's house. There they find that Adam tells Nancy that his brother Lole has broken his leg, and that Jack Nelson has been hired to help out while Lole is in bed. Jack, away, Nancy finds that she is alone, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send all the books they can spare and all they could induce Cousin Columbine to send.

Nancy and Matthew Adam go to Aurora's house to see a neighbor. On their return to Pine Ridge, they are amazed to find the Colville residence all lit up, and asks Matthew if he knows why. He says it's go in and see. Then Nancy learns that she is having her debut, but in a different setting than had been planned for her in Boston.

Nancy's parents and friends give her liberal support to her request for books, and a steamer box arrived in due course. Father Adam signs a sign for the library, and the Adams are worked on the business for the books and decorations to make the room look respectable.

New tie On With The Story

CHAPTER XV.—Continued

To the natives of Pine Ridge the Aladdin Library seemed wonderful enough as it was. "And how every one of these books is so good!" thought Nancy with gratitude. Father Adam's next letter informed more than three hundred books had been sent, and Jack and Mary Taylor had helped her cover with brown paper. They had had fun over it, too. Some of the work was done on winter evenings when Jack and the Adams boys had joined them, as well as a good-looking forest ranger who appeared at church one Sunday, and had continued to appear at the Nelson mansion at frequent intervals ever since.

Mother Adam made and donated cretonne hangings for the windows. Matthew and Mark had built the shelves which graced the whole room, made from lumber they "just found lying around the place," and which had been given them, busy at school, appeared one week-end with a dozen books, and took painted four chairs found in a lumberyard. Transmitted to the cheerful Chinese red, these proved such a success that he insisted on painting Nancy's "desk" as well, and a table for magazines found in Aurora's cellar; while his mother sacrificed a wider porch chair, cushioned to match the hangings at the window.

"This place would be almost cozy if it weren't for the bare walls," said Jack Taylor. "But don't you mention the lack of pictures before I mention it. No knowing what impossible commission she might bring in."

Nancy smiled, and answered: "I'll forgo in Cousin Columbine's attic. I saw an old engraving of Lincoln up there." There was also one of George Washington; and Mary appeared that afternoon with what she said her mother called "a yard of authors"; photographs of the New England poets framed in oak.

Now Adams laughed when she saw this offering.

"It brings things back, Nancy. I don't like to see what she said her mother called 'a yard of authors' in the nursery. That idea used to be all the rage. Mum! I remember those kittens!" This was Mark pausing as he adjusted a crooked window shade.

"They had blue ribbons 'round their necks and extraordinarily long whiskers! But these are good photographs. They'll add a little very touch to our decorations."

Now Nancy felt a thrill of pride at the result of her planning! Out what a few short weeks before had been a bare and useless room, had blossomed this cheery

little place; and already the people of the village were asking if it couldn't be opened every night. Ten days ago they had had the "best of warmings," with hot chocolate and doughnuts for refreshments—a party which even Victor Tubbs had round himself sufficiently to attend!

This had been on a Saturday, and the minister who conducted services in the Pine Ridge church had come every month, arrived in time to make a speech. Nancy hadn't counted on that; but it was a good speech—and she liked the minister, and she liked the fact that he referred to her as "our dear young benefactor." Indeed, at this point in his address, Jack had been taken with an attack of chills, and at least four Adams had winked in her direction; while the squinted Nancy Nelson had felt her ears grow scarlet with confusion.

Nancy smiled at the memory. She was feeling particularly happy this afternoon for good news had arrived from home. Dad was making a new start with a splendid firm. A truck had been ordered an unexpectedly good price for the city house.

"In some ways it's a wrench to give it up," wrote her mother; "but we can't lose this chance; and in any case we shall stay in Edgemore for good. Phil loves his school, and I am loving the life of a country town again. It's such a joy to see your father his cheerful smile; but he's happy and interested now, and wondering if you're not almost ready to come home."

Home! The girl drew a long, long breath. It would be wonderful to see Dad and Mother and Phil and the nurse, and all the old crowd, of course; but Cousin Columbine was going to miss her frightfully. And she couldn't leave until the library was running smoothly and she found somebody to fill her place.

Nancy leaned forward, writing a child's letter with the library was for voluntary contributions, and smiled as a reassuring note met her ears. The first donation had come from a small girl who said, as she dropped in a shining penny: "It's to help your library, Miss Aladdin."

The bank had flourished. Yesterday Jack had contributed the price of three copies of magazines, and was really enjoying some decent novels. Two boys from a nearby ranch whom Nancy had supposed little better than marmosets, were devoting good travel books; and the wife of a health-seeker two miles back in the village, told Nancy with pride in her eyes that it seemed "like heaven" to have something to read again.

"And think," said Cousin Columbine when the girl recounted this pathetic incident, "that I've been too thoughtful to look up what people and see their needs. But so many folk come and go that we take them too much for granted. I'm proud of myself. No wonder that you call Miss Aladdin!"

Speech sounded without, and Nancy glanced up. It was not yet two o'clock, but someone was coming. Then the door swung back to admit her brother and Matthew Adams. Lole was about again now; and Jack was job hunting.

"Any luck?" asked Nancy, as the boys drew up two gray red chairs. Matthew nodded.

"Your kid brother seems to profit by the misadventures of others. Look at him, a leg, and he gets his job. And now my Uncle Tom (Mother's brother, who has a ranch out on the plains) has got him a horse and two of his men, and has sent an B.O. for one of us fellows to help them out. Mark's drawn the horse, and Jack's going back to the ranch again to take his place."

"Well!" said Nancy. "I'm sorry to hear you're out of course, but it's marvelous for Jack; and sometimes there are complications after all."

"A lot of sympathy for him for Uncle Tom's grand Matthew."

Nancy laughed.

"I was merely wondering how long the job was, of course, but it's rapidly; and some day we've got to turn our faces to the East, you know."

Jack said nothing; and suddenly Matt's color rose.

"Why—your not leaving us this spring are you? I mean Miss Columbine said you'd stay a year?"

"I know; but such a thought never entered our heads, Matt. And now she's another star! I'm pretty sure they'll want us to come home. Not that I don't dread leaving Cousin

Columbine. I'm awfully afraid she's going to miss us."

Jack, still silent, arose and went down to a window. Matthew sat looking into space. "Some—some of the rest of us will miss you too, Nancy," he said surprisingly. "There's Mother and—and—"

Nancy laughed outright, and asked, eyes lighted with merriment: "How can you spoil a pretty speech like that, Matt?"

"Spoil it?"

Jack came back, grinning, and shook his head. "The mean old man, that this was no time to mention Mother! home this spring?"

"You don't want to?" questioned his sister.

"It was Matt's turn to stand at the window, from the cushioned chair. The girl was silent, looking down at the toe of Matthew's boot. "I don't know, exactly," she said at last. "I'm crazy to see every one at home, of course; though I'd rather stay here through the summer. But I wonder if Cousin Columbine won't miss us even more if we leave her in the cold. Spring's a cheerful time of year, you know; and she's getting old."

It was Matthew's turn to stand at the window, from which safe retreat he had over his shoulder: "You're going to get along with nature in an environment of the sort; held their chin high through a steady test of cold before they could start on the trend to winter in homes in the south. Churchill is eloquent with stories of courage, treachery and disaster."

He laughed, but Matt, still gazing at the Peak, responded solemnly: "Whoever wrote that bunk was feeble-minded," and added, moving to the window, "I've turned directly away from Miss Aladdin: 'Come on, Jack, we must get going. Mark'll drop in to-morrow to say good-bye, Nancy, Lole's driving him to the Springs where somebody from Prairie Ranch will pick him up. He says he feels as if he were sentenced to Siberia, though it's the first time he hasn't jumped at the chance of going to Uncle Tom's! I—well wonder."

Nancy smiled at this little comment, and went to the door to watch the boys depart. There was a glimpse of the plains from her little porch, and as they lingered a moment the girl asked, her eyes on that unadorned vista: "How your uncle live right on the prairie, Matt?"

The young man nodded.

"Birty miles out, in a big old rambling ranch-house surrounded by cottonwoods—a bully place. Those plains are wonderful. Nancy, and sometimes treacherous, too. We'll take you out after the weather's settled. No knowing what thrilling adventures we may have."

"Light words," Matt little thought that only a few weeks later they would come back to him during long, tragic hours when none of them was over to forget.

Place Of Historic Interest

Port Churchill Enroute With Stories of Courage and Disaster

The other day Port Churchill, Canada's northern port on the Hudson Bay and the prairie's back door to the sea, was celebrating the opening of its shipping season. As a public issue the development of Churchill has been almost talked out of existence. But as a place of historic interest it has great significance and fascination.

For more than three hundred years ships have sailed into the Hudson Bay from the ports of Great Britain and Europe. Into it came the early explorers in their search for the northern passage to the Orient and Cathay. By this route the first live stock and the first plans ever brought to the opening west were freighted by sturdy sailing vessels.

And at Churchill English and French explorers won't miss it. Here the Danish explorer, Munk, in the early part of the seventeenth century, survived a bitter winter in which most of his companions perished. Many decades later, in 1812, the gallant Selkirk and his men, with nature in their environment of the sort; held their chin high through a steady test of cold before they could start on the trend to winter in homes in the south.

Churchill is eloquent with stories of courage, treachery and disaster. It was here that the first of the adventurous to this day. The annals of this new Canadian port may still remind us of the determination of the pioneer explorers and settlers to break the hostile barriers of nature in a new land—Hamilton Settlement.

The Anthony Eden Touch

London Russian Made German Pass

enger Red At Home

Whether London Transport is aware of it or not, at least one of its staff possesses the Anthony Eden touch.

On a week-end last bus a young German seated in front of me tendered his money with the word "Pleasantly." The conductor asked which end of Pleasantly he meant, but the passenger's English was limited to the one word. "Pleasantly."

Thereupon the conductor broke in to assist German, and the matter was adjusted. The delighted passenger moved to a seat beside the door, and a long conversation, glowing with international amity, followed.

They parted with effusive Auf Wiedersehen—London Daily Sketch.

Egyptian Shorthand

Papers Recently Discovered Show System Many Centuries Old

The places of the ancient Egyptian "paper" were discovered not long ago. On them were marks which proved very interesting, for they were clearly a system of shorthand many centuries old. Actually these treasures dated from the third century A.D. and there could be no doubt about them, for there was a perfectly good longhand "translation" given with the shorthand signs. It was the last fact which made the documents the most interesting, for it gave the key to other manuscripts which until then had been mysterious that nobody was able to explain.

Turkish Lip Men

Compels Them To Wear Hats With Bristles

If being allowed to wear what you like is a symbol of freedom in general, Turkish women are distinctly freer than Turkish men. The men today are compelled by law to wear hats with bristles. The bristles are to prevent him from touching the ground with his head, as a religious custom prescribes, when he is saying prayers. The women may wear what they choose.

Little Helps For This Week

The Lord shall give thee rest from thy sorrow and from thy fear, and from the hard bondage wherein thou wast made to serve.— Isaiah 14:3.

Today beneath thy chastening eye, I crave alone for peace and rest; I submit to Thy hand to lie, And feel that it is best.

O Lord, who art as a shadow of a great rock in a weary land, who be-holdeth Thy weak creatures weary of labor, weary of pleasure, weary of hope deferred, weary of rest; in Thine abundant compassion and unutterable tenderness, bring us unto Thy rest.

Thou hast made us for Thyself, and our heart is restless until it rests in Thee. Grant to us above all things what we most desire, to rest. Thou hast our hearts at heart. Thou art the true peace of the heart, Thou only its rest. In this very place that is to Thee, the one Chiefest Eternal Good, we will sleep and rest.

Demands For Maps

Search For New Mineral Deposits

Call For Detailed Information

A marked increase in the demand for maps, among prospectors, sportsmen, foresters, and others, and other causes, is reported by the Topographical and Air Survey Bureau of the Department of the Interior. During the last fiscal year 90,000 copies were distributed by the bureau, in comparison with approximately 70,000 during the preceding year.

The intensive search for new mineral deposits during the year was an important factor in the increase, while the desire of sportsmen to secure detailed maps of an area, when planning fishing, hunting or canoe trips, had a marked tendency to further increase the demand. The fact that a great many of the maps of the bureau are now made from photographs taken from the air, thus ensuring a completeness of detail that does not prevail in the case of the older maps, also contributed to the increase.

A total of seventy-two maps of different districts throughout Canada are in course of preparation by the bureau and many of the areas being covered give promise of early mineral or other developments.

A catalogue of the 1000 or more maps at present available has been published, and copies may be obtained, without charge, upon application to the Surveyor General, Department of the Interior, Ottawa.

Turkish Lip Men

Compels Them To Wear Hats With Bristles

If being allowed to wear what you like is a symbol of freedom in general, Turkish women are distinctly freer than Turkish men. The men today are compelled by law to wear hats with bristles. The bristles are to prevent him from touching the ground with his head, as a religious custom prescribes, when he is saying prayers. The women may wear what they choose.

Place Of Historic Interest

Port Churchill Enroute With Stories of Courage and Disaster

The other day Port Churchill, Canada's northern port on the Hudson Bay and the prairie's back door to the sea, was celebrating the opening of its shipping season. As a public issue the development of Churchill has been almost talked out of existence. But as a place of historic interest it has great significance and fascination.

For more than three hundred years ships have sailed into the Hudson Bay from the ports of Great Britain and Europe. Into it came the early explorers in their search for the northern passage to the Orient and Cathay. By this route the first live stock and the first plans ever brought to the opening west were freighted by sturdy sailing vessels.

And at Churchill English and French explorers won't miss it. Here the Danish explorer, Munk, in the early part of the seventeenth century, survived a bitter winter in which most of his companions perished. Many decades later, in 1812, the gallant Selkirk and his men, with nature in their environment of the sort; held their chin high through a steady test of cold before they could start on the trend to winter in homes in the south.

Churchill is eloquent with stories of courage, treachery and disaster. It was here that the first of the adventurous to this day. The annals of this new Canadian port may still remind us of the determination of the pioneer explorers and settlers to break the hostile barriers of nature in a new land—Hamilton Settlement.

Mr. Sid Worts spent last Sunday in town the guest of his parents, Mr. and Mrs. G. Worts.

Nominations for the Dominion election take place on Oct. 1th.

Mr. R. S. Hodge returned home last Thursday after spending two weeks in Montreal on business in connection with the Glass plant.

A very decided change in the weather brought a heavy frost last night, but today it is quite bright again. Snow fell in some parts of the province yesterday.

Mr. and Mrs. Neil of Calgary and Mr. and Mrs. Vall, of Edmonton were guests at the home of Mr. and Mrs. H. Pinder last week-end.

St. Mary's Altar Society will hold a bridge and whist drive in the I.O.O.F. hall Wednesday 9th at 2:30. Also a social of work and home cooking. Admission will be 25c. Every body welcome.

There was a good attendance at the Social Credit dance in the I.O.O.F. hall last Thursday evening. The music was excellent and all thoroughly enjoyed the evening's program.

Farmers still holding wheat down in 1934 will receive the same price for it from the Canadian Wheat Board as for the 1935 crop, it was announced. It is stored in elevators or held on farms, as long as it is owned by the producer.

Mr. Geo. Ordway, who has been on a motor trip to his old home in New York state, returned to Redcliff last Thursday. He motored over 9,000 miles on his trip. Mrs. Johnson, who has been visiting friends in the east accompanied him home.

Complaints have been made lately about children playing around street lights and by shaking the posts, breaking the mantles and putting the lights out of business. Parents should warn their children against this habit as it spoils our street lighting and is costly to the town.

**ALBERTA CHEESE TAKES
TOP PLACE**

Alberta cheese leaped into the limelight for the first time in many years last week when an exhibit from a cheese factory near Edmonton, in competition with such famous dairy products as the Fraser Valley in B.C. took all three first prizes in the cheese classes at the Vancouver exhibition. The prize-winning Alberta cheese came from a little factory at Buffalo, west of Ladue.

The Ladies Auxiliary to the Legion will meet in the I.O.O.F. hall on Tuesday, Oct. 1st at 2:30 p.m. Mrs. Hope will be the hostess.

The ladies of St. Mary's Altar Society will hold their annual Thanksgiving supper in I.O.O.F. hall on Thursday, Oct. 24th. Supper will be served from 5 to 7:30. Admission Adults 35c. Children under 15, 20c.

That no political party in Canada will emerge from the elections on October 14th with a clear majority over the others the conclusion of British news papers, basing their opinion on reports of their own correspondents in the Dominion.

Miss Naomi Poe, who has been visiting her parents here for the past month, and her sister at Raymond, returned Monday to Alaska, where she is on the nursing staff of the hospital there.

At a Social Credit convention in West Calgary constituency it was decided to oppose Premier Bennett in the coming election. There will also be a Liberal candidate in the field. Hon. McKenzie King will also be opposed by a Social Credit candidate in Prince Albert.

Voters are reminded that in the coming Dominion general election on Oct. 14th the ballot should be marked with an "X" and not 1, 2, 3, as was the case in the last provincial election. The one "X" is used and should be placed opposite the name of the candidate of your choice.
